

Microwave vulcanizing equipment

Leader Microwave Equipment's microwave vulcanizing equipment is popular with investors because of its advantages.

1. Efficient

Our microwave vulcanizing equipment, microwave dry equipment and other microwave machines are equipped with the most advanced microwave technology, including some of our proprietary products. So the sulfidizing time is very short. And the lower error rate makes it more efficient.

2. Safety and environmental protection

Our machines work in fully sealed conditions without energy leaks or harmful gases generating, so there is no air pollution. For one thing, it can ensure the safety of workers. On the other hand, it is environmentally friendly.

3. Higher economic benefits

First of all, our microwave vulcanizing equipment is competitively priced. Plus, its smaller area covering can save you money. In addition, the machine is energy-saving. With higher efficiency and lower failure rates, your operating costs will be more reasonable.

4. The moderate price

As one of the most professional Microwave Vulcanizing Equipment manufacturers, Leader Microwave Equipment can promise our customers that we will use lower vulcanization cost to create better achievements. This can be shown in the following ways:

A. The microwave vulcanizing machine occupies small area, which can save site investment and reduce the waste of valuable land.

B. The fully automatic PLC control system reduces the labor investment, which means the operation cost of the factory will be greatly reduced.

C. Our microwave vulcanizing equipment is all made of durable materials, which can extend the service life of the whole set of machines and save a lot of maintenance costs for customers.

D. Our company will also provide the best after-sales service to ensure the normal operation of the machine, which can also help you save costs on the other hand.

E. Our microwave vulcanization is an environmentally friendly project and can receive more support from government funds and policies, which can reduce the investment of our customers.

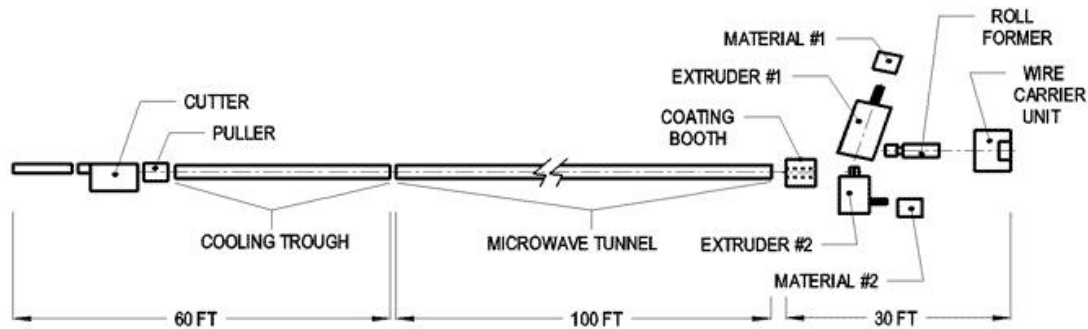

In order to meet different customer requirements. Leader Microwave Equipment developed various styles of microwave vulcanizing equipment for sale.

			
150KW Microwave vulcanizing equipment	200KW Microwave vulcanizing equipment	250KW Microwave vulcanizing equipment	Customized Microwave vulcanizing equipment

Follows are spec for your reference. beyond that ,our products can be customized if you need other size.

Model number	DL-100	DL-200	DL-400
Capacity	5 T / H	10T / H	20T / H
Power	150KW	200KW	250KW
Area	20 m ²	25 m ²	30 m ²

Since 2000, the current microwave rubber vulcanization technology has become increasingly mature, equipment continue to improve, toward highly automated, saving energy and reducing environmental pollution direction, efforts to meet the increasing demand of customers, it has great potential and broad market.

CHARACTERISTICS OF ELECTROMAGNETIC WAVES

ELECTROMAGNETIC WAVE	WAVELENGTH (meters)	FREQUENCY	SIZE ANALOGY
AC Current	5×10^6	60 Hz	Earth
AM Broadcasting	~ 100	560-1600 KHz	Football Field
FM/TV	~2	30-300 MHz	Man
Microwaves (2450 MHz)	0.001-1.0(4.8")	300 MHz-300 GHz	Flea to Cat
Visible Light	~ 5×10^{-7}	10^6 GHz	Smallest object seen with optical microscope

The successful case has also led the Leader Microwave Equipment' s sales of microwave vulcanizing system and microwave drying equipment expand to the international market and we believe our machines will cover every corner of the world in a day. So if you're interested in our related facilities, welcome to visit our Leader Microwave Equipment.
